

Campaign Analytics Dashboard

Product Design, UX Research, SaaS

Overview

CultureX provides tools for campaign execution, management, and performance analytics via their platform 'Influencer' tailored for creators and brands.

For campaign reporting, it often involves aggregating data from various platforms, leading to inconsistent metrics and a lack of actionable insights. Additionally, the absence of real-time updates slows decision-making for marketers and brands.

I led the design of the campaign reporting tool, addressing these challenges by creating an intuitive, centralized system for tracking, analyzing, and sharing campaign performance.

The Problem

Campaign managers, brand representatives, and marketing teams had difficulty tracking campaign data from multiple influencers, leading to fragmented reporting and delayed insights. They required an intuitive tool that provided precise, real-time analytics to streamline their decision-making process.

Here are some of the problems that they faced:

- Lack of real-time updates.
- Overwhelming raw data made it challenging to derive actionable insights.
- Manual data tracking processes were time-consuming and prone to errors.
- Limited visibility into individual influencer performance.
- Lack of interactive visualizations to identify trends and patterns effectively.

My Role

UI/UX Designer

- UX & Market Research
- Competitor Analysis
- Visual Design & Prototyping

RESEARCH

Stakeholder Interviews

Conducted 12 interviews with stakeholders where 5 were Campaign Managers, 4 were

Brand Representatives and 3 were Marketing Analysts.

The Objective was to identify **user needs, challenges, and expectations** for a reporting tool that tracks, analyzes, and shares campaign performance data efficiently. Here are some of the questions asked:

- What metrics do you find most critical when evaluating a campaign's success?
- How do you currently collect and aggregate performance data?
- What challenges do you face in creating and sharing campaign reports?
- What features would you find most helpful in a reporting tool?
- How often do you need real-time updates for campaign performance?

Interview Findings

- **Data Fragmentation:** Most users struggled with consolidating data from multiple platforms
- **Time Consumption:** Manual processes for data aggregation delayed reporting by 2–3 days on average.
- **Inconsistent Metrics:** Lack of standardized metrics made it difficult to compare influencer performance.
- **Visualization Preferences:** Users preferred simple graphs for trend tracking and tables for detailed metrics.
- **Sharing Challenges:** Clients needed concise, customizable reports with clear visuals.

User Personas

Created user personas to represent key stakeholders of the campaign reporting tool, ensuring the design aligned with their needs. Insights from user interviews and surveys were analyzed to identify common behaviors, goals, and challenges, resulting in three primary personas.

Maya Patel

Age: 32 years
Role: Marketing Campaign Manager

Goals

- Streamline reporting workflows to save time.
- Monitor influencer performance in real-time.

Frustrations

- Manually aggregating data from multiple platforms is tedious.
- Difficulties in comparing influencers across campaigns.

Needs

- Customizable dashboards with relevant KPIs.
- Easy-to-generate reports for internal and client presentations.

John Williams

Age: 40 years
Role: Senior Brand Manager

Goals

- Gain high-level insights into campaign ROI.
- Share reports with stakeholders quickly and efficiently.

Frustrations

- Reports often lack clear, concise visuals.
- Limited customization options for branding.

Needs

- Intuitive graphs and summary views.
- Branding options for client-facing reports.

Sarah Chen

Age: 27 years
Role: Data Analyst

Goals

- Dive deep into detailed campaign metrics.
- Identify trends and patterns for optimization.

Frustrations

- Generic dashboards make it hard to perform advanced analyses.
- Lack of granular data filtering options.

Needs

- Advanced filtering and sorting tools.
- Exportable datasets for further analysis in third-party tools.

Competitor Analysis

An analysis to evaluate the features, reporting capabilities, and performance tracking strengths of influencer marketing platforms like **HypeAuditor**, **Influencerity**, and **Qoruz** in order to identify:

- Gaps in existing tools that can be addressed in the design of a new campaign reporting tool.
- Opportunities for differentiation by incorporating advanced customization, user-centric dashboards, and localized insights.
- Key strengths and limitations to ensure the new tool aligns with industry standards while offering unique value propositions.

Feature	 HypeAuditor	 Influencerity	 Qoruz
Customizable Reports	✓	✓	✓
Real-Time Analytics	✓	✓	✗
Custom Report Creation	✓	✗	✗
Live Report Sharing	✓	✗	✗
Visual Data Representation	Clean	Simple	Regional Focus
Usability (UI/UX)	Good	Good	Moderate

Actionable insights from Analysis:

- **Improve Custom Report Creation**
Offer flexible tools to create reports tailored to their needs.
- **Enhance Real-Time Analytics**
Prioritize live, real-time performance tracking.
- **Focus on Regional & Global Insights**
Combine regional trends with global performance insights.
- **Optimize Data Visualization**
Ensure an intuitive design with interactive visualization for better UX.
- **Strengthen Live Report Sharing**
Streamline real-time sharing features to boost user engagement.

THE DESIGN

Dedicated Report Module

Annotations:

- Create New Custom Report
- Detailed Overview of previous Reports

REPORT DATA VISUALIZATION

Platform	Followers	Engagement Rate	Reach	Impressions	Views	Comments	Shares
Instagram	100K	5.2%	100K	100K	100K	100K	100K
YouTube	50K	3.5%	50K	50K	50K	50K	50K
TikTok	20K	8.1%	20K	20K	20K	20K	20K

UPLOADED CONTENT

The interface displays a grid of uploaded content, including images and videos, with a sidebar for navigation. Below the grid, there is a section for 'Top Content' featuring a carousel of popular posts.

GOOGLE TRENDS

INDIVIDUAL INFLUENCER PERFORMANCE

The interface displays a detailed analysis of an individual influencer's performance, including a profile overview, a table of deliverables, and a performance chart. The table shows metrics such as Views, Engagement Rate, and Content Sentiment.

SHARING REPORT WITH BRAND

The interface displays a report shared with a brand, including a title, objective, budget, and a table of deliverables. The report is titled 'Google Report June 2024' and includes a table with columns for Brand, Budget, Influencers, and Deliverables.

Export whole report to a **PDF File** and get options to download it and also shooting it to personalized email.

Either invite a brand on the live report dashboard by **Sign In** feature or share a **Public Link** to the brand.

MISSION RESPONSIVE

But What Next?

While conducting research, it was found that most of the brand executives and campaign managers use **Mobile Phones** to view and track campaign reports. This gave rise to work upon another design solution which focused on:

- Designing a clean, mobile-first interface with intuitive navigation and easily accessible metrics.
- Ensuring essential data points and performance summaries are prominently displayed for quick insights.
- Adapting charts and graphs for mobile, enabling seamless scrolling, zooming, and tapping for detailed views.
- Creating responsive UI elements that adjust effortlessly to different screen sizes and orientations.

- Report generation scaled from 50 to 250, highlighting a **400%** surge in reporting activity and tool utilization.

Key Takeaways

- User-Centric Design Drives Success:**

Conducting comprehensive research, including stakeholder interviews and competitor analysis, was pivotal in identifying pain points and tailoring solutions to user needs. This reinforced the importance of designing intuitive workflows to enhance adoption and satisfaction.

- Iterative Development for Maximum Impact:**

Designing the reporting and sharing modules from scratch involved a continuous cycle of prototyping, testing, and refinement. This iterative approach ensured the final product aligned with user expectations and improved efficiency.

- Scalable Design Principles:**

Balancing functionality and scalability was essential in creating a responsive design. The ability to meet both mobile and web usage scenarios highlighted the significance of flexibility in SaaS design for diverse user environments.
